User Manual

FT series 1KW

Dear Customers

It's very grateful to you for trusting our company and selecting our products! Before using this product, please read carefully this user manual, including installation, using, failure investigation and other important information and suggestion, we also suggest you keep this manual well!

1 Product Features

- Excellent performance because of double MCU intelligent control technology.
- Settable mains supply preferred mode and battery preferred mode for flexible using.
- Settable charge current and multiple threshold voltages for meeting the selection of the different types of batteries.
- Settable output voltage and frequency, making it convenient and practicable.
- Settable unattended function, good for wide range of application scenarios.
- Pure sine wave output, suitable for various types of loads.
- Intelligent cooling device, efficient and energy-saving.
- LCD real-time display of equipment information and operating status.
- Overall protection and alarm functions, safe and reliable.

2 Installation Storage instruction

(1) Unpacking Inspection

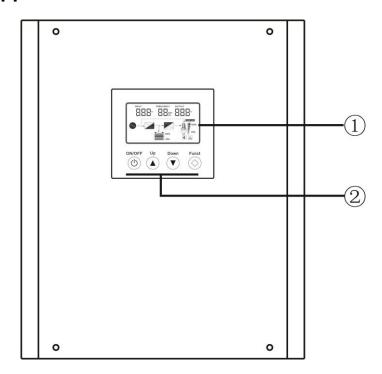

- 1.1 Open the package, inspect product accessories, including:1 host,1 piece user manual
- 1.2 Inspect whether the machine have been damaged during the transport or not, If it have some damage, don't start the machine, contact the logistics company and dealer.

(2) Installation, Storage Notes

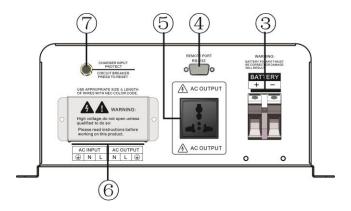

- 2.1 The product installation should be operated by professionals, or assisted by dealer.
- 2.2 If it needs to transport machine, please take proper protection measures; move the machine from low temperature environment to high temperature environment, may appear droplet, please keep it dry and ensure safety.
- 2.3 Don't let the machine exposure in damp, inflammable and explosive or large accumulation of dust environment. Don't cover and block vents, please preset above 10cm air circulation clearance so that having a good cooling.
- 2.4 It is battery switch must be shut down when the equipment is not connected with the grid and not being used

3 Equipment appearance graphical representation guide

(1) Equipment appearance view

(2) 1KW view of equipment appearance

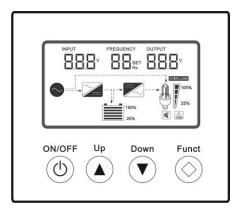

(3) **Guide:**

- 1 -- LCD display
- 2-- ON/OFF button, UP key, Down key, function key
- 3-- Battery input terminals
- 4-- RS232 communication interface (optional function)
- ⑤-- AC output socket
- 6-- AC input/output terminal
- ⑦-- AC input fuse holder

4 Operating instructions

4.1 Panel LCD display graphical representation instruction

The LCD is on the front panel of the inverter and consists of four buttons and an LCD screen, displaying the working status and information of the inverter.

4.1.1 Description of buttons

Button Function		Instruction
(b)	ON/OFF	On/off button single control
(A)	UP	Short press to view inverter parameters in the main interface, short press to increment in the setting interface.
•	Down	Short press to view the inverter parameters in the main interface, and short press to reduce in the setting interface.
\Diamond	Funct	Under the main interface, press and hold for less than 5 seconds to enter the setting interface, under the setting interface, press and hold to confirm the parameters.

4.1.4 LCD parameter setting

Press and hold the "Funct" button for more than 5 seconds in any main interface to enter the program setting mode, and the program option is flashing. Short press the "Up" or "Down" button to select the program, and then short press the "Funct" button to enter, the corresponding parameters It is flashing. Short press the "Up" or "Down" key to set the parameter value, short press the "Funct" key again to confirm and return to the program setting mode.

(2) 24VDC series battery wiring graphical representation

(3) Input/Output wiring diagram

(4) Direction for using of wire diameter

Direction for using of battery, AC input/output wire diameter: (Compute depends on 1mm² copper core with 4-5A current)

Battery wire diameter =
$$\frac{\text{Rated power(W)}}{\text{Rated battery(V)} \times 5\text{A/mm}^2}$$
AC wire diameter =
$$\frac{\text{Rated power(W)}}{\text{Rated AC voltage(V)} \times 5\text{A/mm}^2}$$

For example: Wire diameter of 5000W/48Vdc/220Vac as below.

Battery wire diameter =
$$\frac{5000W}{48V \times 5A/mm^2} \approx 20(mm^2)$$

AC wire diameter = $\frac{5000W}{220V \times 5A/mm^2} \approx 6(mm^2)$

6 Care and Maintenance

- (1) This series products only need rarely care, battery only need keeping charging so that can get expected lifetime.
- (2) If the equipment will not be used for long-term, we suggest it should be charged 1 time every 4~6 month. Usually, the battery can be used for 3~5 years, if it has some problem, then the battery should be changed as soon as possible. When changing battery, it must be operated by professional and obey battery supplier indicate.
- (3) Before changing the battery, it must be closed equipment and break away from the grid, close the battery switch. Take off the metal objects such as rings.
- (4) Connect the battery line, tiny spark in joint belongs to the normal phenomenon, and will not cause harm to the personal safety and equipment. Never connect the battery positive and negative into short or the reverse.

7 Error code and solution

Error code	Faulty	Solution		
E0 (Overcurrent of MOSFETS board	Kindly contact sales if still having this issue after restarting		
503	Output short circuit	Check whether it's overloaded seriously or short circuit inside appliances loaded		
E03	Appliance Overloaded	Check whether it's overloaded, and remove some loads not important		
EBY	Inner Over- temperature	Check whether fan is working well or the air dust for cooling be blocked		
E05	Overvoltage of battery	Check whether battery connection and configuration correct		
E05	Battery's voltage is lower than shutdown voltage	Make sure battery be fully charged, or replace new battery		
E07	Reverse connected cables between transformer with heatsink on power board	Fix the two cables after they are interchanged		
E08	Start Protection when low output voltage	Kindly contact sales if still having this issue after restarting		
E09	Reserved			
E 10	Undervoltage of battery	Check the system voltage of inverter and use same data for the battery pack.		

8 Judgment and treatment for simple faults

Warning: High voltage inside the device! Do not open it by yourself, or try to do maintenance, so as not to be in danger!

	T	T	
Fault	Possible causes	solution	
	Battery undercharge	Make sure battery be full of charging normally	
Time degradation of Machine with loads	Machine connect load overcharge	Move away non-key loads	
	Battery burn-in and can't charge enough power	Please contact with CSR and get battery need changing module	
The machine can't be started	The grid input line or battery input line is in bad connect	Check and reconnection	
Starting up alarm	Low battery	Make sure battery be full of charge normally	
	Overload	Move away non-key loads	
Buzzer for 2s, pause 1s	Internal over-temperature	Check fan and hear dissipation whether be blocked	
Fan sometimes fast, sometimes slow Internal temperature above 45℃ fan fast, be 42℃ fan slow		Normal	

When you contact with engineers, please provide the following information: machine model/problem date/complete description of the problem (including indicator status, battery specification, all of the connection etc).
